

What is claimed is:

1. A data recording program to control a computer to function as a data recording terminal, comprising:

an extracting section to extract a write enable information which shows permitting the writing of data from an information recording medium; and

a data writing section to permit writing data to the information recording medium with which the write enable information was recorded.

2. A data recording program to control a computer to function as a data recording terminal, comprising:

a write disable information extracting section to extract a write disable information which shows prohibiting the writing of data from an information recording medium;

a write disable release information extracting section to extract a write disable release information which shows to release the prohibit on writing of data from the information recording medium; and

a data writing section to prohibit writing data to the information recording medium with which the write disable information was recorded, and to permit writing data to the

information recording medium with which the write disable release information was recorded..

3. An information recording medium comprising:

a write disable information including information which prohibit the writing of data; and

a write enable information including information which permit the writing of data.

4. An information recording medium comprising:

a write disable information including information which prohibit the writing of data; and

a write disable release information including information which release the prohibiting of writing of data.

5. A data recording terminal record the data recorded in an equipment or in a first information recording medium into a second information recording medium, comprising:

a reading out section to read out the data from either the equipment or the first information recording medium;

a extracting section to extract a write enable information which shows permitting the writing of data from the second information recording medium;

a data writing section to permit writing data to the second information recording medium with which the write enable information was recorded.

6. A data recording terminal record the data recorded in an equipment or in a first information recording medium into a second information recording medium, comprising:

a reading out section to read out the data from either the equipment or the first information recording medium;

a write disable information extracting section to extract a write disable information which shows prohibiting the writing of data from the second information recording medium;

a write disable release information extracting section to extract a write disable release information which shows to release the prohibit on writing of data from the second information recording medium; and

a data writing section to prohibit writing data to the second information recording medium with which the write disable information was recorded, and to permit writing data to the second information recording medium with which the write disable release information was recorded.

7. The data recording terminal of claim 5, wherein the equipment is a digital camera or a mobile telephone with camera, the first recording medium is an information recording medium which can be detached and attached to apparatus, and the data is image data of photographs taken using the equipment.

8. A data recording system comprising:  
a write enable information recording section to record a write enable information which shows permitting the writing of data to an information recording medium; and  
a data writing section to permit writing data to the information recording medium with which the write enable information was recorded.

9. A data recording system comprising:  
an information recording medium having a write disable information which shows prohibiting the writing of data;  
a write disable release information recording section to record a write disable release information which shows to release the prohibit on writing of data to the information recording medium; and

a data writing section to prohibit writing data to the information recording medium with which the write disable information was recorded, and to permit writing data to the information recording medium with which the write disable release information was recorded.

10. The data recording system of claim 8, further comprising:

a exhibiting section to exhibit an information recording medium on shop selves;

an information recording terminal to record at least one of the write enable information and a write disable release information to the information recording medium; and

a data recording terminal having the data writing section.

11. A data recording method which record the data recorded in an equipment or in a first information recording medium into a second information recording medium, comprising steps of:

recording a write enable information which shows permitting the writing of data to the second information recording medium;

extracting the write enable information from the second information recording medium, in a data recording terminal;

reading the data recorded in the equipment or in the first information recording medium when the write enable information is recorded on the second information recording medium; and

writing the read data in the second information recording medium.

12. A data recording method which record the data recorded in an equipment or in a first information recording medium into a second information recording medium, comprising steps of:

exhibiting a information recording medium with which a write disable information was recorded, wherein the write disable information including information which prohibit the writing of data;

recording the write disable release information which shows that the prohibit on the writing of the data based on the write disable information was released to the second information recording medium;

extracting the write disable information from the second information recording medium, in a data recording terminal;

extracting the write disable release information from the second information recording medium, in a data recording terminal;

prohibiting the writing of data when the write disable information is recorded on the second information recording medium;

permitting the writing of data when the write disable release information is recorded on the second information recording;

reading the data recorded in the equipment or in the first information recording medium based on judgment of prohibition or permission;

writing the read data in the second information recording medium.

13. The data recording method of claim 11, wherein the equipment is a digital camera or a mobile telephone with camera, the first recording medium is an information recording medium which can be detached and attached to

apparatus, and the data is image data of photographs taken using the equipment.
